RE: Periodic Monitoring Report – First Quarter 2021

Forsyth County-Hightower Road Landfill

Solid Waste Permit Nos.: 058-006D(SL), 058-009D(SL), & 058-010D(SL)

Forsyth County

Dear Mr. Sayer:

Atlantic Coast Consulting, Inc. (ACC) is providing Georgia Department of Natural Resources, Environmental Protection Division (EPD) this Methane Monitoring Report for the closed Hightower Road Solid Waste Landfill. Perimeter monitoring was conducted March 24, 2021 with procedures in accordance with the facility's approved methane monitoring plan and the June 19, 2020 Methane Remediation Plan. Attached is the SWM-19 form and recent potentiometric map. The monitoring well methane concentrations were reported as being less than 5 percent methane by volume during this monitoring event and the methane concentration in the facility structure was less than 1.25 percent methane by volume.

The new solar powered flare/blower unit has been installed at Trench Vent #1. Construction was completed December 23, 2020. The new flare (designated as PH2-MV05) location is depicted on the potentiometric map. Monthly methane monitoring will continue in accordance with the MRP until there are 6 events without methane above compliance limits. This event marks the fourth consecutive month with MM-11R methane readings below the lower explosive limit (LEL). A copy of this report will be placed in the Operating Record. Please contact me if you have any questions regarding this report.

Thank you,

ATLANTIC COAST CONSULTING, INC.

Charles Adams, F Project Manager

SWM-19 FORM AND POTENTIOMETRIC MAP

Periodic Methane Monitoring Report

Quarter 1 / 2021

Quarter or Month / Year

Facility Name:	Hightower Road Landfill	Date(s) of Monitoring:	3/24/2021
Facility Permit #'s:	058-006D(SL), 058-009D(SL)	Monitoring Conducted by:	D.Davis
Permit #'s (cont):	058-010D(SL)	Equipment Field Calibrated by:	D.Davis
County (Location):	Forsyth	Date of Field Calibration:	3/24/2021
Monitoring Equipment:	GEM 5000	Manufacturer Calibration/Service Date:	4/17/2021

- 1. All reports must include a scaled and dated potentiometric surface map, (this applies only to those facilities required to perform groundwater monitoring) that shows ALL monitoring points, accompanied by a table listing the as-built depths and corresponding elevations of the bottoms of the methane monitoring wells and/or barhole punches. The potentiometric surface maps must be updated on an annual basis, and signed & sealed by a qualified groundwater scientist. Those facilities that do not conduct groundwater monitoring should, at a minimum, include a site map that shows ALL monitoring locations.
- 2. All reports must specify whether each monitoring location is a structure, permanent well, barhole punch, or vent (e.g. MM-1=scalehouse, MM-1=well, MM-1=BHP (barhole punch), MM-1=vent, or GWC-1=groundwater well).

3. Monitoring Results

4. Climatic/Physical Conditions at Site

Samples must be collected under normal/average conditions of temperature, pressure, and climate for the season. Barhole punch sampling should not be performed during or immediately after rain events, or when soils are saturated or frozen. All sampling at compliance monitoring locations must be performed after 12:00 pm, and completed by 6:00 pm. Barometric information can be obtained from many locations.
